USING AI TO IMPROVE CARDIOVASCULAR CARE

Milano CMR 2023

Tuesday, 11 April 2023

Onsite & Online

RATIONALE

Artificial intelligence (AI) impact on medicine is huge. AI can significantly support and improve doctors' productivity and diagnostic performance at all stages of the cardiac imaging chain, including classification, automatic quantification, diagnosis, and risk prediction. AI has demonstrated superhuman performances in terms of measurements accuracy and reproducibility. Utilization of AI increases patient safety and decreases healthcare costs. Furthermore, AI is particularly useful for imaging doctors in training as it provides anatomic guidance and interpretation of complex imaging results. During this meeting, AI application in cardiac magnetic resonance (CMR) image analysis and its impact on cardiovascular care will be discussed.

INTENDED AUDIENCE

Cardiovascular imaging doctors, registrars, fellows, PhD students, and radiographers.

EDUCATIONAL OBJECTIVES

- Discuss AI application in CMR analysis and interpretation
- Discuss how AI applied to cardiovascular imaging can impact cardiovascular care
